Project Description	Asbestos Surveys & Removal
Value	£150,000
Start / Finish Date	2015- Ongoing

Project Description

We were appointed in 2015 to carry out asbestos management and refurbishment surveys, asbestos removal, and sampling, to various PLA buildings and sites throughout London and Kent.

Health and safety considerations must be considered for this portfolio of works, including referring to tidal information prior to works commencing. This ensures that any works required at the water edge are carried out at low tide for the safety of all staff. All staff are required to wear life jackets, and non-working supervision in place to review the working environment throughout the duration of works. These arrangements are incorporated into each project risk assessment and method statement.

Specific training is required for all personnel to work on the river, including mast access, river master and river rescue, as well as production of documentation (inc risk assessment) for working around the river.

Dependent on the works required, there have been instances where a rescue boat has been arranged to be on standby whilst our staff are working along the river. This is arranged with PLA prior to works commencing, to be in place for the duration of our works, to ensure PLA's stringent health and safety procedures are adhered to.

The ability of PA Group's logistical and communication skills, especially in terms of health and safety, are a key factor on this contract given the nature of the works.
